Reflection for CS 5004 Lab 5

1. Reflection (What did you learn?)

I certainly learned a lot during this project. I became a lot more comfortable with types. It was also cool to see the project from the week before to be automated. I would also say that it was important for me to learn more about exception handling and how to catch various exceptions appropriately.

2. What did you find most challenging about this assignment?

I found the types to be the most challenging part of this assignment. It was very difficult to keep track of all of the types. Switching through files and how each individual class interacts with one another.

3. How did this design continue to allow for future growth?

In terms of future growth, I became a lot more comfortable interacting with java and how it behaves. I became a lot more comfortable with java in the command line. I learned a lot about types, null values, and exception handling.
